DEIS Appendices– CTF Member Individual comments as of 5/4/2009

App.	Page/Paragraph / Section	Status	Comment
C	Section C.2 Page C.1 et Seq	NEW	Under C.2, the DEIS provides Tables showing Estimated Chemical Contamination in kilograms. Does this represent soil, ground water or materials of construction in each facility? To report these numbers in kilograms does not provide any meaningful information to the reader. In addition, the DEIS in Table C-2, page C-5, reports 187 kg of lead in the Main Process Plant Building. Page C-50 reports 10,000 kg of lead in the leaded glass Viewing windows of the Main Process Plant Building. This inconsistency is also seen in the report for the Vitrification Facility (66kg vs. 1,360 kg in the windows) The tables showing chemical contamination show "contaminant" and “contamination" as in Table C-2, then "chemical" and "amount" as in C-13. These tables should be consistent.
