

To: West Valley Citizen Task Force  
From: Bill Logue and Cindy Cook, Citizen Task Force Facilitators  
Date: May 23, 2008  
Subject: **Summary of the April 29, 2008 Conference Call of the Agenda Work Group**

## **Agenda Work Group Conference Call Participants**

**The following individuals participated in the Agenda Work Group Conference Call:** Sonja Allen, Tom Attridge, Paul Bembia, Bryan Bower, John Chamberlain, Lee Lambert, Joe Patti, and Ray Vaughan.  
**Facilitators:** Cindy Cook and Bill Logue

## **Summary of the Call**

The group discussed a variety of options and topics for future meetings.

**May Meeting.** After discussion, the group agreed that the May meeting will include the following activities and topics:

1. A pre-meeting site tour for members and alternates;
2. An overview of Site facilities that will be addressed in the EIS;
3. A summary of the Decommissioning Plan approach; and
4. A report on the Decommissioning Plan scoping meeting to be held on May 19.

**June Meeting.** The group noted that for the June meeting NYSDEC is scheduled to present their regulatory and licensing regime for the WVDP and SDA. WVES will provide an overview of how the timing of the three primary regulatory processes that apply at the Site interrelate. These are:

1. NEPA/EIS,
2. The Decommissioning Plan Process, and
3. The NYSDEC RCRA Process governing hazardous materials.

Ray Vaughan requested that NYSDOH be invited to participate in the June meeting along with NYSDEC. NYSDEC and NYSDOH are in the process of adopting the License Termination Rule as the standard for cleanup of radioactive waste at facilities under their regulatory authority. Paul Bembia and the facilitators agreed to coordinate this contact and involvement with NYSDOH. Ray asked that in its presentation, NYSDEC describe how the closure standards for the SDA will relate to those that will apply to the NDA.

**Future Meetings.** The group identified a number of potential topics for future meetings including:

- Items raised in May or June meetings needing further discussion
- Public outreach
- An outline of how the EIS will be organized
- The North Plateau Groundwater Plume remediation and how the construction demolition debris landfill affects the plume
